#### Verdict

The Transporter offers consumers the option to buy a wide range of good-performing safety features and earns a gold medal in Euro NCAP's tests. While it still lags behind the best offered on passenger cars, the Transporter remains one of the commercial vans that sets the bar for others in terms of safety.

#### Comment

Some countries get autonomous emergency braking (AEB) as standard; others do not. The system, comprising forward collision warning (FCW) was fitted to the vehicle tested here. When tested approaching the rear of a car, the system performed well, both when the car was stationary and when it was moving slower than the test vehicle. However, good performance was seen only when the target vehicle was directly ahead of, or only slightly offset from the direction of travel of Transporter. Where there was a significant offset to the left or right, the system did not respond to the target. Similarly, at higher speeds, system performance deteriorated, especially when approaching a stationary target. The system performed well in tests of its response to cyclists, and adequately in tests of pedestrian detection.

The optional lane support system performed well. Lane departure warning (LDW) met Euro NCAP's requirements and was rewarded. Lane keep assist (LKA) recognised all lane edges, marked and unmarked and responded in good time to prevent the vehicle drifting too far over the edge. LKA also incorporates emergency lane keeping (ELK) which intervenes more aggressively in certain emergency situations, and results were good in the tests performed here.

A camera-based traffic sign recognition system identifies the local speed limit and provides the information to the driver who can then engage the speed limiter as appropriate. The speed limit information system performed well and speed was well controlled by the limiter.

A driver's seatbelt reminder system is standard but is an option for the passenger seat. The system on the passenger side did not meet Euro NCAP's requirements and was not rewarded. A driver monitoring system warns the driver if steering behaviour characteristic of fatigued or impaired driving is detected. However, the system does not switch on by default at the beginning of each journey and the system was not rewarded.
